A Rapid Testing Framework Context "In this murky, complex, volatile, social world, and given our limited time and materials..." People "...there are people who matter..." Requirements "...who have both explicit and tacit needs and desires for a product." Development "As the product and requirements develop, **Product Risk** and perhaps long afterward, too... ...there is a danger that the product will violate requirements, causing harm. Mission "We strive to serve our clients by understanding requirements examining the product as needed, and evaluating risk." **Test Strategy** "To fulfill our mission we develop and refine a requisite variety of ideas that guide. **Activities** "reasonably inexpensive, yet effective actions, whether formal or informal, deliberative or spontaneous, for the purpose of performing tests. These action include:" Testing Story - Level 2: How's the pro-An explicit and tacit narrative about the status of testing. Learning Reporting "Gaining skill and knowledge about the product, related technology, and context of its use, by any useful means, to develop mental models by which to test." "Making sense of the test process, progress, and results and rendering that into a compelling testing story." **Skills & Heuristics** "Applying skills, knowledge, and fallible methods of solving problems..." Models **Test Results Testers & Team** Explicit and tacit representations Explicit and tacit outcomes of specific "responsible testers do the work while soliciting the help of others, too... of the product or context of use that reveal specific factors to examine or manipulate. test performances including data about bugs, curios, risks, new ideas for tests, test tools or testability. Testability "while advocating and establishing practical testability of the product." Designing Experiments Performing Experiments "Enacting *and adapting* our procedures to discover reliable answers to our questions about the product." "Synthesizing ideas, structures, processes, and tools by which we can systematically explore the status of the product." **Test Procedures** Explicit and tacit methods by which we configure, operate, observe, and evaluate the product. **Test Lab & Tools Oracles** Coverage "...and applying our knowledge, tools, and feelings to recognize problems when we encounter them." "Applying and evaluating our tools and test lab infrastructure..." "...while observing and manipulating the product both intentionally and incidentally..."
